## **Appendix A – Plastic Sphere Dispenser (PSD) Operations**

### **Required Forms**

Information may be contained in the Incident Action Plan (IAP), prescribed fire plan, *NWCG Standards* for Helicopter Operations (NSHO), PMS 510, or agency-specific form – such as Project Aviation Safety Plan (PASP) or Mission Aviation Safety Plan (MASP) – and may be utilized in lieu of the following forms. Required forms are available at <a href="https://www.nwcg.gov/committees/interagency-aerial-ignition-unit">https://www.nwcg.gov/committees/interagency-aerial-ignition-unit</a>.

- PSD Air Operations/Safety GO/NO-GO Checklist\*
- PSD Project Aviation Safety Plan
- Job Hazard Analysis (JHA) or Risk Management Assessment (RMA)
- Aviation Risk Assessment Worksheet (NSHO, Appendix J, <a href="https://www.nwcg.gov/publications/510">https://www.nwcg.gov/publications/510</a>)
- PSD Organization Chart PSD Prescribed Fire
- PSD Organization Chart PSD Wildland Fire
- Helicopter Crash Rescue/Medivac Plan (NSHO, HBM-15, https://www.nwcg.gov/publications/510)
- Hazardous Materials Manifest (*NWCG Standards for Aviation Transport of Hazardous Materials*, PMS 513, https://www.nwcg.gov/publications/513)
- NWCG Standards for Transporting Fuel, PMS 442, <a href="https://www.nwcg.gov/publications/442">https://www.nwcg.gov/publications/442</a>

#### **NOTE: \* INDICATES REQUIRED FORMAT**

## **Optional Document**

- Aerial Ignition Preplanning Checklist
- Interagency PSD Operator Annual Recertification Training Form
- PSD Use Record
- Manufacturer supply contact list
- Briefing Checklist
- Aerial Ignition Device Additional Training

## **Project Aviation Safety Plan**

OPM-6 and FSM-5700 require an agency-specific PASP/MASP be completed prior to any special use missions involving aircraft. The PASP/MASP is a proactive measure used for preplanning and risk assessments which are paramount to a successful accident-free mission. The PASP/MASP allows for a collaborative effort of all personnel involved to address all elements of the mission and generate a plan with risks at acceptable levels. The process is simple. Once the PASP/MASP is completed, project supervisors or flight managers must get approval to execute the mission. The amount of risk involved to accomplish the mission, dictates the level of approval required. The risk assessment matrix included in the PASP/MASP template provides guidance on the level of approval based on the level of risk. A

mission with a level of risk in "Low" or "Medium" may only need approval from a Unit Aviation Manager or Forest Aviation Officer, but a mission in the "Serious" or "High" category will require approval from an Aviation Division or Regional Aviation Manager.

After the mission is approved, conduct an on-site briefing covering the pertaining elements of the mission with all participants, and then you may implement the plan.

The key to a smooth process for the PASP/MASP is to be thorough. Line Officers and Incident Management Team (IMT) Incident Commanders (IC) must be able to understand your plan from a written form. A template for Forest Service and Department of Interior is available to aid in this process.

Example agency-specific PASPs/MASPs are available at https://www.nwcg.gov/committees/interagency-aerial-ignition-unit.

## PSD Air Operations/Safety GO/NO-GO Checklist

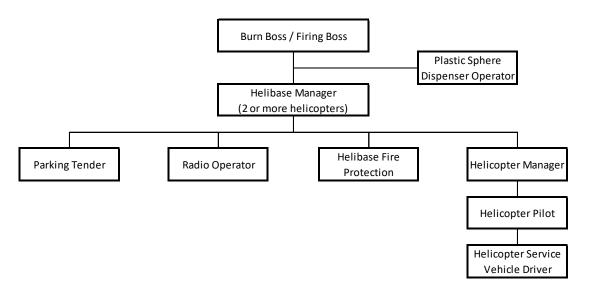

The helicopter operations on this project require the use of this checklist. If all items are not checked as satisfactory and maintained in that state for the duration of the mission, flying operations will be suspended until the deficiency is mitigated.

<b>30</b>	SE SAFETY		
<u> </u>	140/00	Approved Project Aviation Safety Plan.	
		Qualified Helibase Manager assigned (if necessary).	
		Helibase/helispot meet established standards.	
		Organizational chart posted, assignments known.	
		Communication chart posted, Assignments known.  Communication chart posted. Frequency assignments known.	
		Helibase/helispot fire protection meets established standards.	
		Crash rescue/evacuation kits on the helibase/helispot.	
		·	
		Current Mishap Response Plan posted at helibase/dispatch and ready to implement  All personnel briefed. Aerial ignition personnel briefed on in-flight operations.	
		Personnel protective equipment meets established standards.	
IDCD	NET/DIL OT/S	Flight hazard map posted/ hazards known to pilot.	
AIRCRA	AFT/PILOT(S		
		Check pilot and aircraft approval cards, qualified for mission?	
		Check pilot and aircraft limitations.	
		Load calculations prepared, reviewed, signed, and posted.	
		Check aircraft radios, frequencies programmed?	
		Remove ALL loose articles from aircraft.	
		Fire shelters for each occupant must be carried in the aircraft and accessible during flight.	
		Water bucket ordered with aircraft (optional)	
		Approved secondary restraint – check to see it does not reach beyond the sill of the aircraft	
		when secured.	
		Discuss flight profile, watch out situations including loss of tail rotor authority, settling with	
N A O T		power, downwind turns, etc.	
LASTI	SPHERE	DISPENSER The state of the stat	
		Installation correct with restraints in place.	
		Bench test complete, mechanical operations satisfactory.	
		Extinguisher (water reservoir) system filled and operational.	
		Glycol reservoir filled and tightly capped	
		Appropriate ignition delay achieved, recommend approximately 20 second delay	
		Intercom and aircraft-to-ground communications operable.	
		Pilot has been briefed and agrees that all is in order.	
		Sphere containers secured.	
		Seat belt cutter available for emergency use.	
		Additional one gallon backup emergency water container available.	
		Tool kit/Operator's manual on board aircraft (optional).	
BURNI	NG OPERAT	IONS	
_		All persons briefed and assignments known.	
		Maps/photos of project area used/posted.	
		Special weather considerations known/discussed.	
		Communication plan posted and frequency assignments known	
		Emergency operations plan known and discussed.	
		Personal protective equipment meets established standards.	
		Special safety considerations known and discussed.	
SUPPO	RT EQUIPM	ENT/PERSONNEL	
		Adequate support equipment/personnel to complete mission.	
	1	r	

	Radios/communications operationally checked.	
	Support equipment/personnel prepositioned before actual operations begin.	
	Adequate supply of plastic spheres and glycol to complete project.	
FIRING BOSS		
	Aerial firing patterns and commands discussed and understood	
	PSD emergency procedures discussed and understood	
	Crew Resource Management between Pilot, FIRB, and PLDO	
	Understanding of aircraft radio operation	
	Understand aircraft limitations and flight profile – discussed with Pilot and PLDO

## **BRIEFING CHECKLIST**

Discussion Items: Pre-flight discussion points to be briefed with all.  Items that are not being met below require justification and may require a new risk assessment.  The project supervisor is responsible for this per the Project Aviation Safety Plan.			
Clear and bright complete- Fuel sample (If vendor fuel truck is used)	☐ Fuel planning (Fuel truck not on on-site)	Aircraft still meets mission objectives (equipment and performance capabilities)	
Load calculation(s)/Weight and Balance (Complete and adjusted as needed)	☐ Manifest(s) and briefings	Risk assessment still applicable to mission objectives	
Aerial hazard/site map available and reviewed for specific project hazards	Project site conditions evaluated (sending and receiving)	Crash rescue & medivac plan procedures reviewed	
Equipment inspected (i.e. sling gear, nets, swivels)	Airspace de-conflicted (if required)	Hazardous materials addressed per Interagency Aviation Transportation of Hazardous Materials Guide (NFES 1068) and SDS.	
Communication and contact information plan reviewed	PPE and Aviation Life Support Equipment (ALSE) Handbook requirements met	Personnel assignments identified, individual qualifications/ aviation training verified	
Flight follow procedures	Required Go-No Go check lists completed pending mission type	☐ Weather briefing complete	
Briefing Notes:
