SUBJECT: Rationale for Assignment of Complex Incident Management Teams (CIMT) During 2022 Pilot Phase

Purpose: This memorandum provides information on the use of the *NWCG Wildland Fire Risk and Complexity Assessment (RCA)*, PMS 236, <https://www.nwcg.gov/publications/236>, during the 2022 pilot phase of implementation of Complex Incident Management (CIM).

Please distribute this information through your agency channels.

Issue/Action: In 2022, as part of the implementation of Complex Incident Management (CIM), some Geographic Areas are working to transition Type 2 and Type 1 IMTs to Complex Incident Management Teams (CIMTs). During the pilot phase when there is a need for an organization above the Type 3 level for incident management, Agency Administrators and other decision-makers may use the following as rationale as appropriate:

Complex Incident Management (CIM) pilot efforts are occurring geographically and nationally to ensure the framework and criteria are met to support full implementation of CIM in 2024. During this transition, a CIMT may be ordered instead of either a Type 1 team or Type 2 team. A CIMT will expand or contract as needed based on the complexity of the incident. For this incident, our assessment indicates the need for a [Type 1 or Type 2] [based on ...]. Therefore, if a CIMT is available, they will be assigned to the incident.

NWCG will solicit feedback on the RCA for a revision that will provide an overall complexity rating to inform decision-making. A draft will be available for review and testing in January 2023. A final version will be available in 2024 to support full implementation of CIM.

Background and Coordination: NWCG, the Fire Management Board (FMB), and the National Multi-Agency Coordinating Group (NMAC) are prioritizing the implementation of CIM and collaborating on solutions to transition the current business model and systems effectively and efficiently into a future model. This transition requires commitment from stakeholders.
