

NWCG CURRICULUM MANAGEMENT ISSUE PAPER #106
MODIFICATION OF COURSE NAME FOR
RX-510, APPLIED FIRE EFFECTS
October 27, 2009

BACKGROUND

Since the start of the RX-510 Applied Fire Effects course the Wildland Fire Environment Working Team/Fuels Management Sub-committee, has had constant discussion with the RX-510 Steering Committee to create an evolving course that is adaptive to current policy.

CURRENT STATUS

The current changes and development of the RX-510 course have altered the original title. The RX-510 Steering Committee feels that a new name RX-510 Advanced Fire Effects would better reflect the content of the course. The course still meets all NWCG standards, as well as the needs of the interagency fire group.

RECOMMENDATION

It is the recommendation of the Fuels Management Sub-committee and the RX-510 Steering Committee that the name of the course be revised to **Advanced Fire Effects**. This name will better align the course based upon current content, application, and interagency support. The course designator, RX-510, will remain the same.

APPROVED / **DENIED**
