| Evaluate net         | w model and    | decisions thre     | esholds created               | d at the national wo         | orkshop for the |  |  |

- Evaluate new model and decisions thresholds created at the national workshop for the prototype areas
- Implement rollout to the local units through the use of a regional NFDRS rollout workshop
- All workshops will be complete by May 2019.

#### 8. SPECIAL INSTRUCTIONS

• We still need the GA's to identify the number of workshops and location. Also estimate the number of attendees and establish the cadre for each workshop.

#### HEALTH AND SAFETY MESSAGE

"We don't Plan on Luck to be Safe, We Plan on Sound Risk Management and Good Decisions"

INCIDENT: NFDRS Rollout DATE: October 2018 - June 2019

Major Hazards & Risks: Driving, Human Factors, Medical Emergencies

**Driving:** In most cases, driving will be the major risk for all personnel attending the Rollout Sessions. Highway and local traffic, unfamiliar areas and roads, weather conditions and human factors can create added risks.

#### Let's Add Human Factors......

- > Complacency: eating, drinking, texting, passengers' asleep, other distractions.
- > Daydreaming: Thinking of other work, home, rushing to arrive at your session to get it over with, big plans for leave time to be taken, etc.

It only takes a second of distraction to cause an accident, injury, or even worse, a fatality.

Medical Emergencies - Do you know what to do in case of a medical emergency? Review the Medical Incident Report "8 Line" at the end of the IRPG. Your actions may save a life! Report any medical problem immediately to event organizers or dial "911". Have a plan for your Rollout session!

### A Safe Culture

- Communicate hazards to all resources
- Openly discuss risks
- Decide and implement mitigations as a group
- Foster an environment of safety

Prepared by: Tony Rivers, SOF1, NIMO Safety Officer

### Communication Plan Key Messages

- The national fire danger rating system is used by federal, state and local wildland fire response agencies and organizations to determine wildland fire potential across a range of biomes in the United States.
- The rollout of NFDRS 2016 includes the testing, calibration, transition and incorporation of input from users.
- The rollout plan includes updates to the tools Fire Family Plus (FF+) and the Weather Information Management System (WIMS) which utilize the NFDRS 2106 system.
- When the rollout of NFDRS 2016 is complete it will provide a stable NFDRS 2016 system along with updates to FF+ and the WIMS.
- This rollout plan will allow changes to reflect input received from regions and field units during the two years of implementation.
- NFDRS 2016 will be implemented parallel to the existing 1978 and 1988 NFDRS models in 2019. The field may use all versions to compare and review NFDRS outputs. Users will be able to provide feedback on how the NFDRS 2016 compares to the older versions in supporting sound decision making. In 2020, the full transition to NFDRS 2016 will occur and the old models will be discontinued.
- Advancements to the science include:
  - 1) Improvements to the calculations of fire danger indices and components.
  - 2) Automation of the calculations in the WIMS
  - 3) Reduction in the number of fuel models to more accurately reflect fire danger levels across the landscape.
- With the update, manual tasks previously required in WIMS, such as daily publishing of observations, managing green-up and freeze-dates, and entering season codes and greenness factors will be obsolete reducing human interventions.
- Forest Service Manual 5120 requires all Forests to be covered by a Fire Danger Operating Plan.

#### Key Messages cont.,

- The National Fire Danger Rating System is the Forest Service standard for fire danger based decisions. This includes, but is not limited to:
  - 1) Determination of Adjective Fire Danger Rating,
  - 2) Staffing levels
  - 3) Response
  - 4) Preparedness levels
  - 5) Fire prevention
  - 6) Fire restrictions
  - 7) Prescribed Burn Approval Act
- Fire Danger Operating plan workshops have been implemented in the past by cadre from the Advanced NFDRS course (taught at NAFRI) over the last four years in three different Geographic Areas.
- Implementing NFDRS 2016 will result in simplification of NFDRS. Many unused components of the system can safely be removed, while the core usefulness and functionality of the system remains essentially unchanged.
- Software programing will change the NFDRS 2016 system significantly, output indices that can be used to guide fire management decisions will remain: Energy Release Component, Burning Index, Spread Component, Ignition Component and fuel moisture values.
- Updates to the Fire Family Plus application will be transparent to the user.
- By the end of 2020, full transition to the NFDRS 2016 system will have occurred allowing for the decommissioning of NFDRS 1978 and 1988 systems.
- Future enhancements to NFDRS include a proposed movement to a geospatial and gridded platform.
- It will be necessary to re-validate Fire Family Plus outputs which are likely to change with the NFDRS 2016 reduction in fuel models and the availability of historic hourly weather data. Products such as fire danger operating plan breakpoints and fire business thresholds, pocket cards, staffing levels and response plans will likely be impacted.
