

**NWCG Data Standard**  
**PRESCRIBED FIRE ESCAPE INDICATOR**  
**Standard Data Values**  
November 28, 2007

Standard data values are provided when a data attribute has a pre-determined set of terms, codes, and/or numbers that must be used in order for the data to be valid. The purpose of standard data values is to ensure consistency and accuracy within a system and across multiple systems.

The following list provides NWCG's standard data values for this data attribute:

<b>Value</b>	<b>Description</b>
N	No – the wildfire is not the result of an escaped management ignited planned ignition (i.e., a prescribed burned)
Y	Yes – the wildfire is the result of an escaped management ignited planned ignition (i.e., a prescribed burned)
