

# Created On Date-Time

Status: Approved

## Description

Date/time that the record was created.

## Business Rules

1. Must be submitted for exchange in Unix epoch format. This field is number of milliseconds since 1 January 1970 00:00:00 Universal Time. See <https://www.epochconverter.com/> for help converting dates to this format.
2. Time zone should be documented in metadata. Example: YYYYMMDDhhmmss.ss
3. The time must be submitted in milliseconds and should be exactly 13 digits in length.
4. Must be valid date format for data exchange.
5. Date should follow the 24 hour clock, YYYY-MM-DDhh.mm.ssZ, ISO8601 Standard.
6. Date/time fields must be accompanied by the UTC offset.
7. Date/time values with UTC offset must be rendered in local incident time for the user interface and business use (including downloaded products).
8. Format must be in short date time MM/DD/YYYY with HH:MM on a 24-hour clock for the user interface and business use (including downloaded products).
9. Assigned by IRWIN during data exchange.

## Identity & Classification

|                          |                      |
|--------------------------|----------------------|
| <b>Label</b>             | Created On Date-Time |
| <b>Data Element Type</b> | String Data Element  |
| <b>Approval Status</b>   | Approved             |

## Format Specifications

---

This data element has separate formatting rules depending on whether it is used for direct data entry or for system-to-system data exchange.

### Data Entry

|                           |                                                                                                                                                                                                                                                                        |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Format</b>             | ISO 8601 Format:<br>YYYY-MM-DDTHH:MM:SSZ<br>US Format:<br>MM/DD/YYYY HH:MM PM<br>YYYY = the calendar year<br>MM = the calendar month of the year<br>DD = the calendar day of the year<br>HH = the hour<br>MM = the minutes<br>SS = the seconds<br>Z = zulu<br>AM or PM |
| <b>Physical Data Type</b> | Date-Time                                                                                                                                                                                                                                                              |
| <b>Example</b>            | ISO 8601 Format:<br>2025-03-14T15:30:00Z<br>US Format:                                                                                                                                                                                                                 |

### Data Exchange

|                           |                                                        |
|---------------------------|--------------------------------------------------------|
| <b>Exchange Name</b>      | CreatedOnDateTime                                      |
| <b>Format</b>             | Unix epoch format (milliseconds since January 1, 1970) |
| <b>Length</b>             | 13 characters                                          |
| <b>Physical Data Type</b> | Numeric                                                |
| <b>Example</b>            | 1483228800000                                          |

|                        |
