

Resource Quarantined Indicator

Status: Approved

Description

Indicates whether a resource is potentially in conflict with another resource of the same kind, based on the overhead conflict detection rules.

Business Rules

1. Default on submit is 0 unless a potential conflict is detected, in which case the default is 1.
2. If IsQuarantined is set to 0 (false) and IsValid is set to 1 (true), then participating systems will be able to query and update the resource record.
3. Must be not null on submit or update.
4. Records where IsQuarantined = 1 (true) will be visible and updatable only to the system that created the record.
5. See IRWIN Integration Specification for the rules that trigger a potential duplicate overhead resource.

Identity & Classification

Label	Resource Quarantined Indicator
Data Element Type	String Data Element
Applies To	Overhead
Approval Status	Approved

Format Specification

Data Exchange	
Data Exchange Name	IsQuarantinedResource
Alternate Data Exchange Name	IsQuarantined
Format	9
